The XT Camera System

Seek extraordinary

© Reuben Wu

Your passion for photography takes you far and wide, to distant and spectacular places. As of this moment, you have the absolute best camera system to bring along: the Phase One XT.

Designed for convenience and engineered for precision, the travel-friendly XT Camera System fits easily into your

lifestyle. It pairs an intuitive interface with the unparalleled technology and image quality for which Phase One is known. The XT offers you total control over the shooting workflow, and absolute freedom to focus on your creative process. As beautiful as it is powerful, the XT pioneers new opportunities for you to seek, capture and share the extraordinary.

In a class of its own

The XT Camera System is developed as the next step in the evolution of the field camera. Phase One was born digital and, by pioneering a fully integrated camera with medium and large format optics, we streamline and re-imagine what a field camera can do. The XT Camera System features complete digital integration and workflow, and a brand new, exclusive shutter technology: the X-Shutter.

Unparalleled image quality

The breathtaking quality of the images from an XT Camera System are sure to impress and inspire others. Phase One sets the standard for image quality in medium format, so your photography will stand out.

Crafted for you

The XT Camera System is designed for convenience and engineered for precision. The exclusive, high-quality finishes of each system are given individual care, resulting in a camera that is desired as much for its beauty as for its image quality.

Travel-friendly design

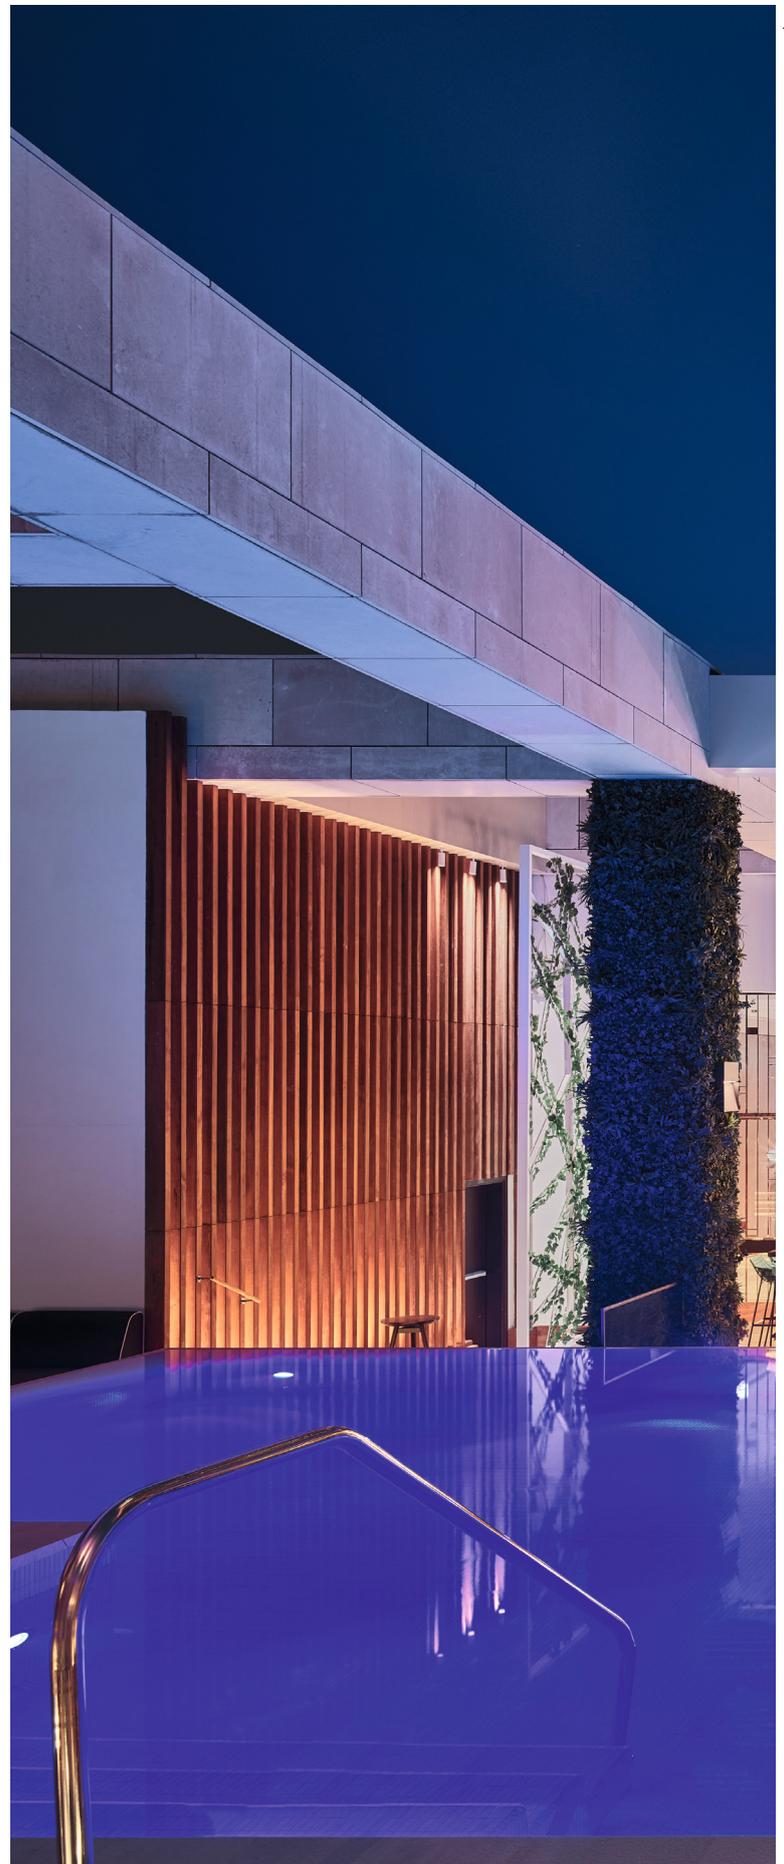

The XT Camera System emphasizes a modular and travel-friendly design that fits easily into your lifestyle. The form and aesthetic underline the system's priorities as a new breed of camera, masterfully designed for portability without sacrificing quality.

Effortless capture

Turning a new page in the history of the field camera, the XT delivers full digital integration and intuitive, easy-to-master operation. Meticulous attention has been given to fine details and usability features, elevating your shooting experience.

Expanding camera system

The XT Camera System is designed to expand and evolve. With the brains of the IQ4 Infinity Platform and the heart of the X-Shutter, the integration and features of the XT support limitless potential for even simpler use. The XT is a camera system that is extraordinary now and is poised to get even better with age.

"I really wanted to shoot the Bolivian salt flats at sunset. When the sun is setting on those unique polygon shapes the salt flats form on the ground, the shadows would get longer and longer, and the landscape would look different every few seconds."

- Reuben Wu

Landscape photography by Reuben Wu

I think what people often say about my photography is that it's otherworldly, that these landscapes don't appear to be from this planet. But actually, what I'm trying to show is that these are very worldly, earthly images, of places close to us. We've been exploring Mars and we haven't yet seen anything like the extraordinary landscapes we have right here. So what I'm trying to do through my photography is to renew people's perspective of our own planet, to make the familiar appear new and

fresh, so that people look a bit harder at the things around them, appreciate them and take more care of them.

A lot of my photos created with drone lights feature circles. To me, this shape represents harmony, perfection. With this image, I wanted to feature the circle within the landscape of Bolivia's salt flats. Having the light really low on the salt flats created an interesting mood, with the light emanating from the circle and the shadows cast in the salt.

© Reuben Wu

I like the XT because it's so geared towards travel, it fits my workflow on location. It's a lot more integrated than technical cameras, and everything is controlled using one screen. I don't have to think about a separate viewfinder, a cable release and so on. Everything is centralized. Also, it's light. It allows me to scout, hike in difficult areas, set up my composition easily, craft an image and get it exactly right. I end up taking a few amazing photographs, which is way better than taking hundreds of not so amazing ones.

Quality optics

Known for their great resolving power and contrast even at large apertures, the optical design of Rodenstock HR lenses reduces diffraction and color noise, even at the pixel density of the IQ4 150MP, providing further flexibility to the full frame medium format sensor.

With Rodenstock as a strategic partner, the introduction of these exclusive, digitally integrated lenses is only the beginning of the XT Camera System lens range.

 **RODENSTOCK**

XT - Rodenstock HR Digaron-W 32mm f/4

is a high-quality wide-angle lens with a large image circle and almost no distortion, suitable for significant X and Y shift.

XT - Rodenstock HR Digaron-S 23mm f/5.6

is simply the best super wide medium format lens on the market.

XT - Rodenstock HR
Digaron-W 70mm f/5.6

is a normal focal length lens with impeccable
image quality and a large image circle.

Landscape photography by Paul Reiffer

Paul's successful career as a photographer is built on sweeping landscapes and busy cityscapes. His work has been exhibited all around the world, from the Royal Albert Hall and Houses of Parliament in London, to the largest screens in Times Square, and even a sandbank in the middle of the Indian Ocean.

"I use Phase One for my landscape work, and I'm amazed by the image quality every time I download the contents of my memory card".

- Paul Reiffer

Integrated Movements

The XT Camera System takes full advantage of the Rodenstock optics with 24mm of shift on both X and Y axes. These movements allow you to correct for perspective distortion or create panoramic and stitched images quickly and precisely. The shift position of the camera is integrated into the image file providing immediate feedback for later use.

Additionally, the design of the XT allows you to quickly rotate the camera between portrait and landscape orientation while remaining securely mounted to a tripod via an integrated Arca Swiss-type mount, further expanding the integrated workflow.

The X-Shutter

At the heart of the XT - Rodenstock HR lenses is the X-Shutter. The X-Shutter is an intelligently integrated and electronically controlled shutter, born out of Phase One's industrial applications and experience. The X-Shutter is purpose-built for the XT Camera System to allow for finer control in a smaller form factor. Powered by the IQ4, the X-Shutter shares in the ambition of the Infinity Platform for future growth and flexibility.

IQ4 Infinity Platform

At the core of the XT Camera System is the IQ4, built on the powerful and flexible Infinity Platform. The Infinity Platform dynamically expands and adapts to market demands and technological changes. It provides you with a steady stream of new features, functions, compatibility and improved usability. The Infinity Platform enables the same IQ4 to seamlessly switch from the professional power and functionality of the XF, to the elegance and simplicity of the XT, in an instant.

Capture One Inside

We integrated the cutting-edge RAW editing core of the Capture One software directly into your camera to reflect your personal aesthetic in the RAW file itself. Thanks to the ample processing power of the IQ4, with Capture One Inside you get greater control over your RAW capture when you are away from your computer and immersed in your subject.
